Course Description

Instructor: Mr Salmaan Farooq

Course Code: DIC107T

Credit Hours: 3 Credits

Master the visual language of the web.

This course covers typography, color theory, and wireframing to design engaging, human-centered digital environments.

Master Your Academic Journey

Reduce stress, hit every deadline, and achieve academic excellence with an intelligent tracking system designed for serious students and researchers. Let the tool disappear so your work can shine.

Tools for Deep Work

Everything you need to maintain academic discipline without the clutter.

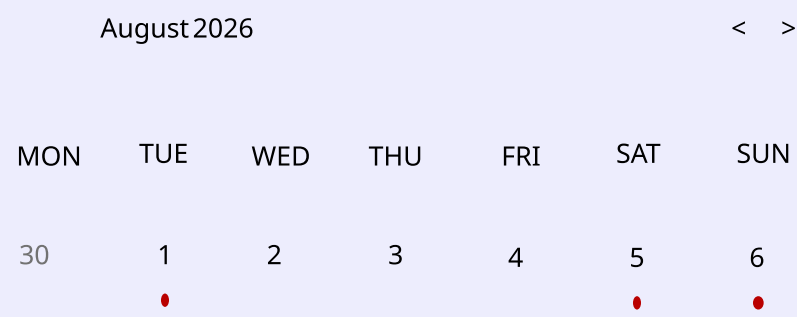

Intelligent Assignment Tracker

Break down massive research papers and complex projects into manageable, highly legible task lists. Our structured layout reduces cognitive load.

Interactive Calendar

Visualize your semester at a glance. Fixed grid philosophy ensures deadlines never slip through the cracks.

Daily Habit Logging

Build momentum with minimal friction. Track study sessions, reading hours, and deep work intervals. Progress is highlighted in clear, actionable metrics.

Grade Summary

Subjects

[see all](#)

Global Literature

Explore literary works from different cultures and languages, and analyze how themes and narratives connect across societies

[View Details](#)

Web Designing

Learn the principles of layout, visual hierarchy, and user experience to build intuitive, functional websites.

[View Details](#)

Python

Build a foundation in programming logic and syntax through hands-on coding exercises and projects.

[View Details](#)

Upcomming Deadlines

Your biographical analysis essay on Toba Tek Singh is due Monday, August 24 by 11:59 PM. Please focus on the literary devices discussed in our last lecture.

Problem sets covering evaluation metrics and differentiation are due Wednesday, August 19 by 5:00 PM. Show all mathematical steps clearly. Late submissions will not be accepted.

Interactive wireframe submissions are due Friday, August 14 by 11:59 PM. Prioritize intuitive user flows over complex coding, and submit your links through the student portal.

Python

Build a foundation in programming logic and syntax through hands-on coding exercises and projects.

[View Details](#)

Mathematics

The fundamental study of patterns, structures, and pure logic, providing the quantitative reasoning required for algorithmic thinking and data analysis.

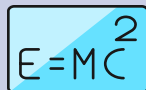

[View Details](#)

Disaster Management

A comprehensive study of risk assessment, emergency response, and mitigation strategies to effectively manage and recover from natural and human-made crises.

[View Details](#)

Physics

A foundational study of the natural world, utilizing mathematical frameworks to understand the forces of nature, motion, and the properties of matter.
